Look At The World

With Its Excellent Performance And Quality, Good Service,
It Has Won Wide Recognition And Praise From Users Around The World.

SUPERFIRE

Shenzhen Supfire Prosperity Equ. Co., Ltd, Established In 2008 And Located In Shenzhen, China, Is A Famous Outdoor Lighting Products Wholesaler. We Wholesale Outdoor Lighting Products And Related Lighting Products, Including Flashlights, Headlamps, bicycle Lights, work Lights, camping Lights, searchlights, Solar Lighting Products And Other Professional Lighting Products.

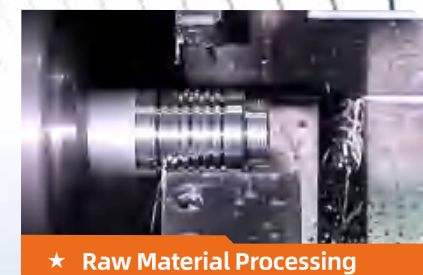

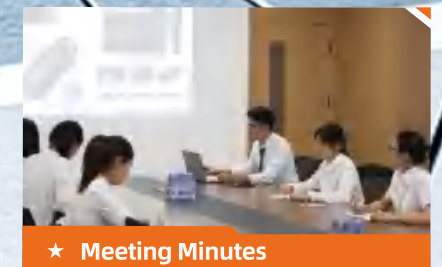

Company Profile

SUPERFIRE Has Become One Of The Most Reliable Outdoor Lighting Products Brands In The World, Adhering To The Business Tenet Of "survive By Quality And Development By Reputation".

We Are Committed To Providing High-quality Products & The Best Services To Meet Our Customers' Requirements.

With Professional R & D Teams, Strict Quality Control And Continuous Improved Brand Value, SUPERFIRE Has Won More Than 10 Honors Such As The "national Hundreds Of Quality Integrity Bencing Demonstration Enterprises" And Obtained The Iso9001 Quality Management System Certification, Explosion -proof Certificate, CE, FCC , ROHS And Other Authoritative Certifications.

The Company Has Obtained A Number Of Patent Certificates, And Has Ranked First In Sales Of Major E -commerce Outdoor Lighting Categories For Many Years.

DEVELOPMENT PATH

Based In Shenzhen, It Radiates Across The World

KNOWLEDGE CENTER

What Are Led's?

Led (full Name: Light-emitting Diode, Referred To As Led) Is A Solid-state Semiconductor Component That Can Directly Convert Electricity Into Light. Since The Development Of This Semiconductor Component, It Is Generally Used As An Indicator Light And A Display Panel, But With The Increase In Technology, It Can Be Used As A Light Source. It Can Not Only Directly Convert Electrical Energy Into Light Energy With High Efficiency, But Also Has A Maximum Of Tens Of Thousands Of Hours With A Service Life Of 100,000 Hours, It Has The Characteristics Of Energy Saving And Environmental Protection, Small Size And Long Life, And Can Be Used In Various Harsh Environments Such As Low Temperature.

The Circuit System

The Circuit System Is One Of The Most Important Components In The Led Flashlight, Responsible For Driving The Led And Realizing The Function Of Dimming Operation. The Circuit Of Superfire Flashlight Introduces Advanced Power Management Circuit Design, Which Can Output A Stable Driving Current, So That The Output Of The Flashlight Is Constant During The Entire Working Process, And The Beam Does Not Flicker. In Order To Increase The Efficiency And Reliability Of The Circuit, We Adopt An Optimized Design, Select The Best Electronic Components, And Even Carry Out Gold-plated Or Silver-plated Treatment On All Contact Parts. In Addition, We Also Added A Microcomputer Processor To The Circuit System, So That The Brightness Of The Flashlight Can Be Adjusted At Will To Adapt To Different Usage Environments. When Using The Same Battery, The Driving Circuit Of The Led Plays A Vital Role In Improving The Power Conversion Efficiency And Extending The Battery Life Of All Led Flashlights. SUPERFIRE'S Led Circuits Are Small Yet Highly Efficient And Reliable, Providing Flashlights With Longer Life, Higher Lumen Output And Better Compatibility.

Reflector And Lens

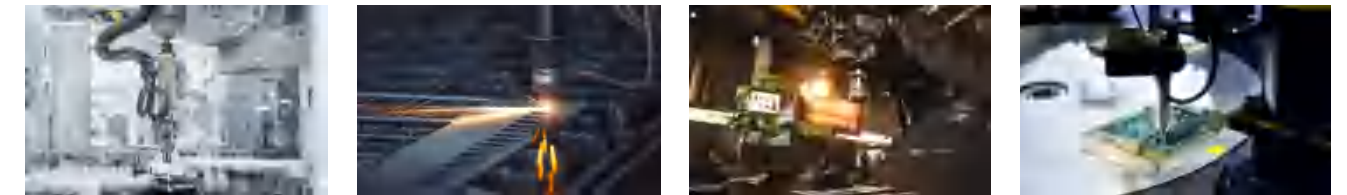

Our Designers Have As Many As 10 Years Of Experience In The Field Of Optical Design, And We Have Designed A Dedicated High-efficiency Metal Reflector For Each Flashlight, Allowing The Flashlight To Output A Soft And Perfect Beam Of Light, Taking Into Account Long-range And Short-range Lighting. At The Same Time, In Order To Protect This Delicate Optical Component, We Specially Equip Each Superfire Flashlight With A Coated Scratch-resistant Tempered Glass Lens.

The Industry's First Digital Precision Optimization Technology - Pdot

The Degree To Which The Light Source Presents The True Color Of The Object Is Called The Color Rendering Of The Light Source, And The Color Rendering Index (cri) Is A Quantification Of The Color Rendering. Standard Light Source (such As Sunlight) The Color Rendering Index Of 100 Is Defined As 100, And The Color Rendering Index Of Other Light Sources Is Lower Than 100. The Higher The Color Rendering, The Closer The Color Rendering Index Value Is To 100, The Stronger The Ability To Restore The Color Of The Object, And The Easier It Is For The Human Eye To Distinguish The Color Of The Object, So The Experience Is Also Better.

Cri Color Rendering Index

Using Optical Design Software And Digital Simulation Technology To Carry Out "point-to-point" Precise Optimization Of The Optical System, So That The Optical System Can Achieve Maximum Optimization, Higher Efficiency, Stronger Long-range Shooting Ability, And More Perfect Spot.

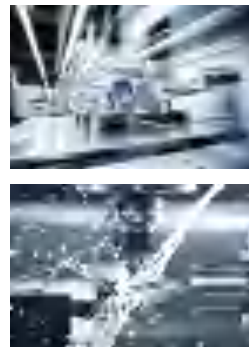

Aluminum Barrel

Each SUPERFIRE Flashlight Is Made Of Lightweight, High-hardness Aerospace-grade Aluminum Alloy. At The Same Time, Superfire Is Also The First Manufacturer In The World To Use Casting Technology To Make Flashlights. The Flashlights Made By Using Casting Technology Can Be Integrally Formed With The Barrel And Internal Structure, And The Technological Level Is Equivalent To That Of F1 Racing Engines And Aerospace Equipment. Compared With Flashlights Of The Same Level, It Is 37% Smaller And 30% Lighter, And The One-piece Engineering Structure Is More Than 200% More Compressive Than The Split-type Structure. Compared With Flashlights Processed From "aluminum Rods", They Have Higher Mechanical Strength And Are Better Able To Cope With Various Harsh Environments (such As Car Rolling, Falling From High Altitude, Etc.). In Addition, Compared With The "tubular" Materials Used By Other Manufacturers, Most Of SUPERFIRE'S Flashlight Casings Are Made Of A Single Piece Of "aluminum Rod" That Is Drilled And Cut, And There Is No Tubular Aluminum Alloy Material That Necessarily There Are Small Cracks, So The Flashlight Processed By "aluminum Rod" Also Has Higher Mechanical Strength Than The Flashlight Body Of Other Manufacturers. In Addition To Using High-strength Aluminum Rod Material And Industry-leading Machining Processes, Most Superfire Flashlights Are Mil-spec 3-anodized. Military-standard Three-stage Oxidation Treatment Can Form A Layer Of High-strength Protective Film On The Surface Of Aluminum Alloy, Which Is Second Only To Diamond In Hardness, Which Can Effectively Prevent The Flashlight From Being Scratched, Worn Or Corroded.

Integral Casting

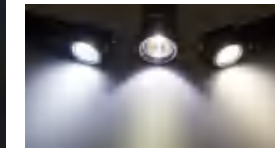

SUPERFIRE Is The First Enterprise In The Industry To Introduce The Integrated Casting Process Into The Manufacture Of Flashlights. One-piece Casting Can Make The Flashlight Lighter In Weight And More Compact In Size, And At The Same Time Have A Stronger Structure And Better Heat Dissipation. For Example, The Industry's First Flashlight Ec4 Adopts One-piece Casting. Compared With Other Cnc-cut Similar Products, Its Volume Is 37% Smaller, The Weight Is 30% Lighter, But The Heat Dissipation Area Is 200%.

Medium White / Warm Light

Neutral White Light Refers To A Light Source With A Color Temperature Of 4000-5000k, Which Is Between Cool White Light And Warm Light. The Light Is Soft, Which Can Effectively Reduce The Stimulation Of Cold Light To Human Eyes, Making People Feel Pleasant And Comfortable. At The Same Time, The Color Rendering Is High (> 80%), Making It Easier For Users To Identify Objects; The Penetrating Power Is Strong, And Can Effectively Penetrate Smoke At The Same Time, The Luminous Efficiency

Is High, Which Enables Users To See The Target Clearly And Saves Power. Warm Light Refers To A Light Source With A Color Temperature Of 3000-3500k. The Spectrum Of Red Light Wavelengths Is A Little More Than That Of White Light, And It Is

Yellowish. The Light Is Soft, Which Can Effectively Reduce The Stimulation Of Cold Light To Human Eyes, And At The Same Time, The High Color Rendering Makes It Easier For Users To Identify Objects.

Ultraviolet Light / Infrared Light

Ultraviolet Light Refers To Light With A Wavelength Smaller Than That Of Visible Light, And It Is Also Called Ultraviolet Light. This Color Has The Shortest Wavelength In Visible Light, Also Known As Black Light (black Light). Ultraviolet Flashlight Refers To A Flashlight That Emits Light In The Ultraviolet Spectrum. It Has A Wide Range Of Applications, Including Identifying Counterfeit Documents, Combining Colorless Phosphors For Tracking, Forensic Evidence Collection, Eod And Equipment Inspection, Insect Arrest (such As Scorpions, Etc.), Very Powerful. Infrared Light, Which Is Necessary For Tactics, Can Be Used In Conjunction With Night Vision Equipment And Infrared Cameras In Dark Combat Environments To Achieve Low-interference Operations. It Is Suitable For Night Observation, Search And Rescue, Law Enforcement, Military Operations And Other Scenarios.

EACH SCENE RECOMMENDED MODEL

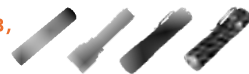

LIFE BASED FROM NATURE

Detection, Banknote Verification, Sterilization

For Daily Detection Of Pet Urine And Stains, Photos Of Scorpions Or Other Insects, Identification Of Currency, Identification Of Anti-counterfeiting, Ultraviolet Sterilization, Detection Of Liquid Leaks In Cars And Criminal Investigations, Uv Lamps Can Be Used. Ultraviolet Light Helps Us Do Various Detections By Exciting Materials That Can Exhibit Fluorescence Or Other Visible Light.

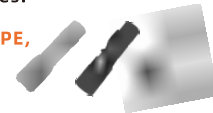

MODELS: S11-H, UV08, Z03, UC06, UV05, UV03, A5(365nm), A5(395nm)

Military And Police Law Enforcement

In The Application Of Military And Police Law Enforcement, Simple And Intuitive Operation Is The Most Important Performance Of The Flashlight, So The Design Of One-button Strobe Absolutely Meets This Condition. In Addition, In Addition To The Bright Lighting Ability, It Also Needs Some Necessary Tactical Defense Capabilities, Such As Using Accessories Such As Attack Heads, Tactical Rings, Clamps, And Tactical Tail Lines, Which Is Conducive To Enhancing The Overall Combat Capabilities.

MODELS: V8-S, X60-T, F5, F3, L6-R5, L6-XPE, C8-T6,

Camping

As A Camping Light, It Is Most Convenient To Choose A Small And Light One That Can Be Used With A Buckle. In Terms Of Brightness, Extremely Bright Files Are Not Required, But Lighting Products With Soft Light Effects, Good Color Rendering, And Long Battery Life Are Required.

MODELS: T35, T26-S/T26, T60/T60-A, T39, T56, T61, T36, T28, T65, T31, T20, T25

Mountaineering

For High-altitude Climbing, Due To The Harsh Environment, It Is Necessary To Consider Cold Resistance While Selecting The Brightness, Battery Life, And Range Of Lighting Tools To Ensure The Stability Of Use In Harsh Environments. In Terms Of Carrying, Products That Can Free Hands And Be Lightweight Will Be More Popular.

MODELS: HL60, HL31, HL08, HL25, HL71

Searching / Rescuing

In The Process Of Search And Rescue, The Brightness And Range Of Lighting Tools Will Be Given Priority, While Weight And Volume Considerations Will Be Secondary. After All, High Performance Is The Most Important.

MODELS: Y12, Y5, Y20, GT60, M20, M17, M15-X, M9-X, M9-E, M16

Caving Exploration

The environment corresponding to the caving exploration is relatively dangerous, and the reflectivity inside the cave is low, so the brightness must be high! In addition, there is water in the cave and the temperature is low. Generally, the light is required to have good water resistance and cold resistance. At the same time, the light is required to be durable and can withstand the impact and fall of stones without damage.

MODELS: HL60, HL31, HL08, HL71, L3 SERIES, Y12, Y5, Y20

Hiking

Hiking does not require too much brightness. Since the process takes a long time, try to choose light and stable lighting tools, and at the same time have a long battery life. However, the team leader needs lighting tools with higher brightness and longer range to facilitate the exploration of the terrain ahead. If necessary, a red warning light is required to indicate the location, so that partners can find you.

MODELS: HL23 SERIES, HL75 SERIES, HL05 SERIES, HL65, HL16, HL18, HL25

Night Running

For long-distance cross-country running, runners are more willing to choose lightweight headlamps with good short-distance flood lighting and long battery life. When necessary, they need to provide higher brightness and red light warning capabilities. For urban nighttime casual runners, light fixtures that are easy to carry and perform well can make their running safer.

MODELS: HL65, HL05 SERIES, HL23 SERIES, HL75 SERIES,

Night Fishing

In the process of night fishing, it is not necessary to use lighting tools for a long time, so the requirements for battery life are not high. You can choose a lighting tool with blue light. Since the blue light is relatively inconspicuous, it can reduce the situation of disturbing fish schools, and some fish schools will also tend to blue light, so it can attract fish schools to gather. In addition, the blue light can also make the float produce fluorescence, making it clearly visible and making the night fishing effect better.

MODELS: L1-S, GF30, GF01, GF03

Industrial work

For mechanical overhauls, rechargeable lighting products are less expensive to use and therefore more popular. In addition, lighting tools with high brightness and large floodlight are also an important choice for night work. At the same time, they should have the advantages of easy portability, simple operation, waterproof and dustproof, etc. For high-risk operations such as coal and surveying, it is also necessary to consider the explosion-proof function to ensure safety and stability.

MODELS: HL25, HL31, HL60, HL22, HL20, HL11

EDC

This kind of flashlight is generally a miniature spare flashlight, which must be small and light so that it can be carried around anytime. In some emergency situations, it is mainly used for emergency use. Therefore, the EDC flashlight does not need to be too bright, but the battery life should be long to avoid frequent charging. In addition, there are fewer gears, not too many functions, and easy to operate.

MODEL: EF01, X18, L28, S3-A, TH04, G19

Riding

In The Process Of Riding, Because Of The Fast Speed And The Complex And Changeable Roads, Night Riding Requires Good Brightness, And Also Has High Requirements For Battery Life. In Addition, Large Floodlights Are Very Important For Night Riding, So As To Facilitate Irradiation To The Front Wheel Area And Avoid Blind Spots. Bicycle Lights Based On Easy Disassembly And Simple Operation Will Be More Popular.

MODELS: G26, X102, MX16, G6, G15/G15-S, G12, G7/G7-S, G20

Hunting

For Hunting Users, High-brightness Spotlights Are Usually Required, Which Brings Longer Range And Shorter Battery Life. At The Same Time, The Flashlight Should Have Anti-shock Characteristics, Which Can Effectively Avoid Damage Due To Recoil When Shooting. Resulting Shedding Or Deviation. In Addition, Because Some Wild Animals Are Not Sensitive To Green Light, Green Light Lighting Can Be Used When Necessary.

MODELS: L3 SERIES, Y5, Y20, D15 P90, R3

Diving

Diving Flashlights Emphasize Absolute Waterproof Capability And Reliability, And Require High Brightness, As Long As The Lighting Time Is Sufficient. The Flexibility Of Use Is Better, And It Is Best To Have A Flashlight With A Hand Strap To Prevent Loss. In Addition, It Is Best To Have A Red Light Assist Function, With The Help Of Supplementary Light For Insufficient Underwater Colors.

Explosion-proof Light Series EP01

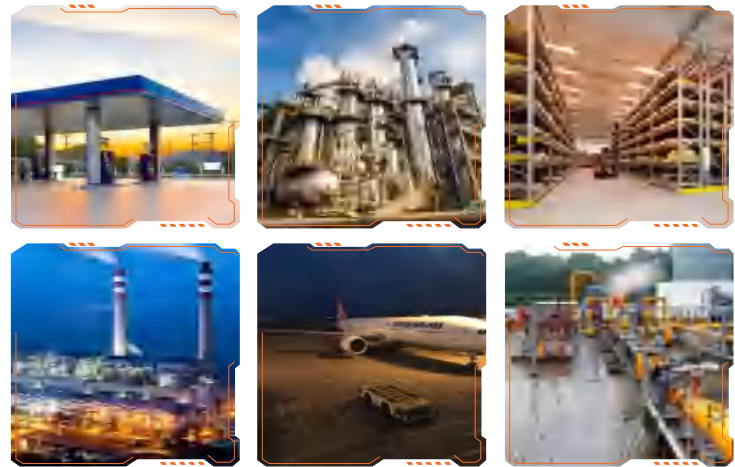

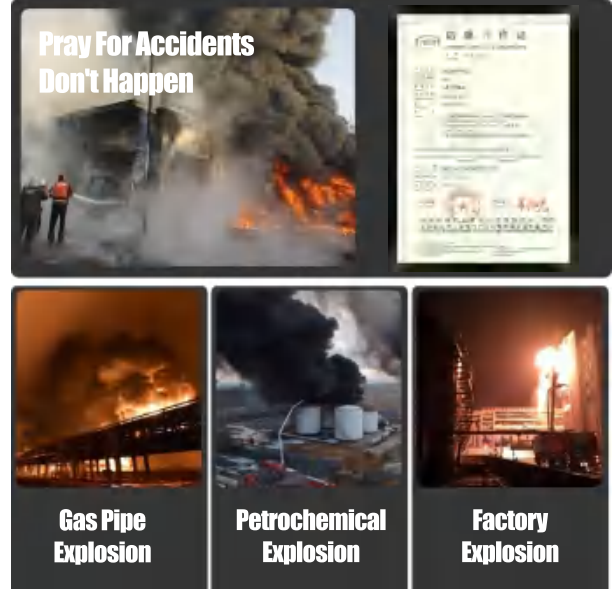

Explosion-proof Lamp Series Are Used In Dangerous Places Where Flammable Gas And Dust Exist. It Can Prevent The Possible Arc, Spark And High Temperature In The Flashlight From Igniting The Flammable Gas And Dust In The Surrounding Environment, So As To Meet The Explosion-proof Requirements. The Products Are Widely Used In Various Flammable And Explosive Places As Well As Grid Power, Factory Power, Oil Field, Chemical Industry, Fire Protection, Railway, Industrial And Mining Industries As Mobile Lighting.
